MODEL FOR OUR DreamFreeze[®] PROCESS

Our special DreamFreeze[®] technique results in improved quality over traditional freezing:

Traditional freezing method shows significant drip-loss when product is thawed, as much as 5.0% or more. Product often shows signs of deterioration or browning.

With DreamFreeze[®] there is almost no drip-loss - approximately 0.6% - and no deterioration. Products retains a vivid color, shiny appearance, and the delicious taste of fresh-from-the-sea!
